**CBI/Ex. 4**

Thanks Megan. I know you are in high demand! I definitely understand, no worries.

Dan may want to change the surface water grouping as well, but for now lets keep it as I sent to you. Fro the "Near Durango", lets compare to any of the samples from Bakers Bridge south (but not to any of the New Mexico data).

Not sure that one background surface water sample is applicable to that whole length of the river, but lets start there for now.

Call if questions. Thank you so much.

Ok!

I have been pulled in a million directions this morning – entering surface water now with updated results.

On the background info you have a location for “Near Durango” would this be most appropriate to compare to the Bakers Bridge results?

M

**Subject:** FW: background values for sediment

Please hold off entering sediment backgrnd numbers – still determining how to stratify.

Thanks

**Subject:** background values for sediment

Hi Megan,

Here are our background values for sediment, stratified (as with surface water) for all areas around Durango, and location A72. Please feel free to call if questions. 303 514 7562. Thanks.
